

I have 3 subscriptions to XM radio because it provides programing and quality not available from over the air broadcasting. Instead of stepping up to the challenge of the competition of satellite radio, NAB has issued petition 04-160 in an effort to hide from the results of technology.

I strongly urge that this petition be rejected as a silly attempt to reject the advances of progress. Network Broadcasters would be better served by improving their service, not by limiting my choices.

Thank you for your indulgence.

Sam Boston
